

Decision Tree. (CH 6)

- ① A story of the Application of Decision Tree.
- ② Gini-index Model. (CART)
(impurity index / impurity reduction).
- ③ Entropy Model.
(Entropy / Information Gain).

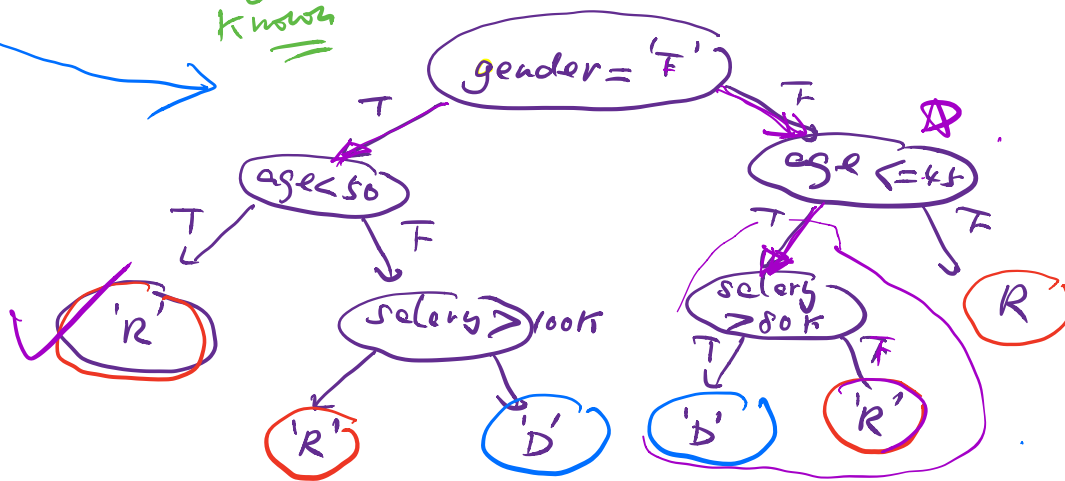

predictor / feature

target / output

No.	age	gender	salary	Party
1	17	F	60K	R
2	20	M	100K	D
3	40	M	150K	D
4	55	F	160K	D
5	70	M	30K	R
6	30	F	70K	D
7	25	M	110K	D
8	49	M	40K	R
9	60	F	80K	R
10	45	F	100K	?

How to Build up a Decision Tree?

→ CART (Gini-index Model)
impurity-index.

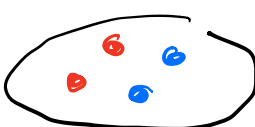

→ How to classify Data
 $\# \text{ of class } \Rightarrow \text{To make the "pure"}$
 $1 - \sum_{i=1}^M p_i^2$ Gini-index

Data set - Kristi :
 (Most pure)

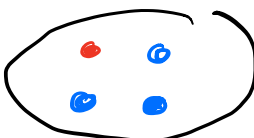

$$1 - \left(\frac{100\%}{4}\right)^2 - (0)^2 = 0$$

Rebecca :
 (Most impure)

$$1 - \left(\frac{1}{2}\right)^2 - \left(\frac{1}{2}\right)^2 = 1 - \frac{1}{4} - \frac{1}{4} = 0.5$$

Yogi :
 (Mid)

$$\begin{aligned} \text{Gini-index} &= 1 - \left(\frac{1}{4}\right)^2 - \left(\frac{3}{4}\right)^2 \\ &= 1 - \frac{1}{16} = \frac{15}{16} = 0.9375 \end{aligned}$$

Order 3 data set According to impurity :

pure: homogeneous

According to impurity :

Rebecca > Yogi > Kristi.
 0.5 0.9375 0.

$$gini(age) = \frac{4}{9} \times \frac{72}{25} + \frac{4}{9} \times 0$$

$$= \frac{4}{15}$$

Keren
 impurity Reduct = 0.67

Data Set: { 3 B, 6 R }

$$gini_original = 1 - \left(\frac{1}{3}\right)^2 - \left(\frac{2}{3}\right)^2$$

$$= 1 - \frac{1}{9} - \frac{4}{9} = \left(\frac{4}{9}\right)$$

$$gini_by_Yogi = \frac{3}{9} \cdot \underbrace{gini(age < 25)}_{\text{do}}$$

$$+ \frac{6}{9} \cdot \underbrace{gini(age \geq 25)}_{\text{do}}$$

$$= 0$$

$$gini_reduct = \frac{4}{9} - 0 = \frac{4}{9}$$

For Decision Tree from

Gini index reduce

$$= \frac{4}{9} - \frac{4}{15} = \underline{\underline{0.26}}$$

● ● ● ● ● ● ● ● ● ●

$$= 1 - \left(\frac{1}{3}\right)^2 - \left(\frac{2}{3}\right)^2$$

$$= 1 - \frac{1}{9} - \frac{4}{9} = \frac{4}{9}$$
